

SPECIFICATION

Faroderm Curette / Skin Curetta

Item: I4 804

Faroderm® skin curettes allow precise and gentle tissue removal. The one-sided and extremely sharp-ground cutting edge is made of hardened stainless steel and enables an optimal curettage. Further possible applications are medical foot and nail care, for example when removing nail skin or also for repair in the nail model. Thanks to the practical handle and the various sizes of 4 mm and 7 mm, small areas can be scraped, or removed.

Advantages of the Faroderm® Skin Curettes

- Extremely sharp edge
- Made in Germany
- Sterile disposable instrument with protective cap
- Very good price and quality

The Faroderm® Curette is suitable for the curettage of:

- Basal cell carcinomas
- Vulgar warts
- Seborrheic warts
- Mollusca contagiosa

- Solar keratoses
- Epidermal nevi
- Nävus sebaceus

As well for:

- Tissue collection for diagnostic purposes. purposes
- Surgical debridement
